

We all have our own favorite app/s. Tell me why do you like it? What makes it good. How do you use it and how long have you been using it? What features are there?

I am not a fan of using social media application, but I appreciate **twitter** a lot because the aesthetic is there, the design is very basic, and it is user friendly. Even though I am not using it too long, I get to familiarize and know different features of the application.

What I also like about the twitter is they consider their user's preference color to their timeline which is a nice move because not all people have the same taste of color, fonts, and backgrounds.

What is twitter?

Twitter is a system where you can do “microblogging” that allows you to send and receive short posts called tweets. Blogging has different purposes, it can be academic, your own opinions, news, etc.
